WAVE SPRING (WITHOUT DISCS)
MOLLA WAVE (SENZA DISCHI)
VESPA 50-125 ET3

The wave spring is a spiral of new design produced with high-precisions techniques. This spring, thanks to its honeycomb structure, grants a perfect flatness of the clutch thrust sides and it can bear loads till 200kg. Polini wave spring is set by the factory to bear 80 kg, that can be modified thanks to the setting shims available in the packaging, that let the variation of the load till 200 kg of thrust. The spring is perfectly placed in the clutch hub prearranged with a proper centering housing. The clutch hub and the pressure-plates are made of machined nitride steel. The material used to produce the clutch discs lets a greatly increased friction coefficient thus increasing its resistance under stress. The FOR RACE clutch is made of 4 steel discs with cork friction material (1,9mm thick) and 3 steel discs (1mm thick) and its assembly is recommended on original engines or with max. 15hp. The EVOLUTION clutch is made of 4 steel discs with sintered friction material with high performance (1,9mm thick) and 3 steel discs (1mm thick) and its assembly is recommended on tuned engines with more 15hp.

La molla wave è una spirale di nuova concezione prodotta con tecniche costruttive di alta precisione. Questa molla grazie alla sua struttura ad alveare, garantisce un'ottima planarità sulle facce di spinta della frizione e tollera carichi elevati fino a 200 Kg. Di serie la molla wave Polini è tarata per avere un carico di 80 kg., che può essere modificato grazie a spessori di settaggio disponibili all'interno della confezione, che consentono di variare il carico fino a 200 Kg. di spinta. La molla è perfettamente alloggiata nel mozzo frizione predisposto con apposita sede di centraggio. Il mozzo frizione e i piattelli spingi disco sono in acciaio nitruato ricavato dal pieno. I dischi frizione sono stati perfezionati con un materiale che ne aumenta il coefficiente d'attrito per migliorarne la tenuta sotto sforzo. La frizione FOR RACE è composta da 4 dischi in acciaio rivestiti con materiale d'attrito in sughero (spessore 1,9 mm.) e 3 in acciaio (spessore 1 mm.) ed il montaggio è consigliato per motori originali o preparati fino a 15 HP. La frizione EVOLUTION è composta da 4 dischi in acciaio rivestiti con materiale d'attrito sinterizzato ad alte prestazioni (spessore 1,9 mm) e tre in acciaio (spessore 1 mm.) ed il montaggio è consigliato per motori preparati sopra i 15 HP.

TRACTION CONTROL T-MAX 530 - 560

Polini Traction Control device for Yamaha T-Max 530 and 560 has been designed to deactivate the traction control every time you start your scooter without acting on the scooter setting. When the scooter is equipped with special parts that increase the performance and engine rpm, it goes closed to the engagement limit of the original assistance and it causes the cut of the current with consequently engine power reduction. Thanks to the Polini traction Control for Yamaha T-Max device it is now possible to deactivate automatically the traction control when starting your scooter, thus granting smooth and regular performance. The device comes with ON/OFF button to activate and deactivate it and return the scooter to the original factory configuration.

Polini Traction Control per Yamaha T-Max 530 e 560 è stato pensato per disattivare il controllo di trazione ogni volta che si accende lo scooter senza intervenire nel programma di settaggio dello scooter. Quando lo scooter è equipaggiato con parti speciali che incrementano le prestazioni e aumentano i giri del motore esso si avvicina alla soglia d'innesto dell'assistenza originale e provoca il taglio della corrente con i relativi cali del motore. Grazie al Polini Traction Control per Yamaha T-Max è ora possibile escludere il controllo di trazione automaticamente all'accensione dello scooter, così da garantire prestazioni continue e regolari. La centralina è comunque predisposta di un tasto ON/OFF per attivare e disattivare il dispositivo e riportare subito lo scooter allo stato originale. La centralina è stata progettata per essere utilizzata sia sul T-MAX 530 che T-MAX 560. Il montaggio avviene senza tagliare cavi e senza modificare i cablaggi con la possibilità di ritornare alla configurazione originale.

T-MAX 530 - 560

UNLIMITED SPEED TRACTION CONTROL T-MAX 560

The new Polini Unlimited Speed-Traction Control device for Yamaha T-Max 560 allows to disable the speed control present on the new generation of the TMax and, at the same time, to deactivate the traction control. When the scooter is equipped with special parts that increase the performance and engine rpm, it goes closed to the engagement limit of the original assistance and it causes the cut of the current with consequent engine power reduction. Thanks to the Polini Unlimited Speed-Traction Control, it is now possible to deactivate automatically the traction control when starting your scooter, thus granting smooth and regular performance. The assembly does not require any cable cutting or wiring modification. The ON/OFF button allows to activate and to deactivate the device and to reset the scooter to the original factory configuration.

Il nuovo dispositivo Polini Unlimited Speed-Traction Control per Yamaha TMax 560, consente di disattivare il controllo di velocità presente sulla nuova generazione di TMax ed allo stesso tempo disattivare il controllo della trazione. Quando lo scooter è equipaggiato con parti speciali che incrementano le prestazioni ed aumentano i giri del motore, esso si avvicina alla soglia d'innesto dell'assistenza originale e provoca il taglio della corrente con relativi cali del motore. Grazie al Polini Unlimited Speed-Traction Control è ora possibile escludere il controllo di trazione automaticamente all'accensione dello scooter, così da garantire prestazioni continue e regolari. Il montaggio avviene senza tagliare cavi e senza modificare i cablaggi. Il tasto ON/OFF consente di attivare e disattivare il dispositivo e riportare subito lo scooter allo stato originale.

EVOLUTION FORK - PIAGGIO ZIP VESPA SMALL FRAME COMPATIBLE

POLINI EVOLUTION FORK

FOR PIAGGIO ZIP - VESPA SMALL FRAME

The Polini Evolution fork for Piaggio Zip, lowered than the original one to be like the model used in the races, has been reinforced in the most stressed structural parts. These features offer a very good set that you can further customize by adjusting the fork height through the interchangeable shims supplied with it.

FORCELLA POLINI EVOLUTION

PIAGGIO ZIP - VESPA SMALL FRAME

La forcella Polini Evolution per Piaggio Zip, ribassata rispetto all'originale come si usa nelle competizioni in pista, è rinforzata nei punti più soggetti a stress strutturali. Queste caratteristiche offrono un ottimo set up che è ulteriormente personalizzabile cambiando l'altezza della forcella grazie agli spessori intercambiabili forniti di serie.

THE FIRST POLINI EVOLUTION SCOOTER ENGINE

Developed with advanced Moto GP solutions, and proper for Piaggio ZIP SP, is dedicated to the real riders.

Riders who have the race track in their DNA, who do not know any difficulty, who are not satisfied with best but that ask for the maximum power.

Riders who feed themselves with real passion; who live the scooter races on the circuits with only one goal: to win.

Polini Evolution crankcase for Zip SP with 10" wheels is born from a deep study that has not only involved the crankcase design, but the entire engine group with all its integrated parts. It does not have middle way but only technical choices made to achieve "no limits" performance.

Many the technical features:

- Light alloy crankcase with a new engine mount that optimizes the exhaust shape going out from the cylinder. The mount is fitted on two bearings that enlarge the frame and improve torsional resistance.
- Two the exhaust systems available, both hand made in special steel: one for the 70 cc engines and one for the 100cc ones.
- The bearings housings have been enlarged and improved with specific features to house the crankshafts with bigger diameters and width. Two crankshafts are available according to the displacements.
- The reed valve housing is bigger to permit the use of different carburetors, from 19mm to 28mm or with even bigger chokes. The thickness of the valve carbon reeds will be specific according to the engine displacement
- Cylinder fixing system with two flanges. Two different cylinders cast in light alloy, water cooled, one d. 47,6 and one d. 52, derived from the 125 GP Polini

engine that took part to the Moto GP World Championship. Coolant flow through the Close deck system. Barrel with nickel - siliceous coating. Five transfers with highly performing diagram. Transfer with central bridge to optimize the exhaust gasses emission. Light alloy gravity-cast piston at high siliceous content with chrome piston ring. The head is exactly the same used for the 125GP engine, with 6-screw fixing system, squish and special combustion chamber. It is compulsory to fit the electric water pump.

- The crankcase inside geometry has been studied to have more space for the transmission group.
- The aim is that to use the new belt with bigger dimensions both for the length and the width so that to transmit as much as traction power possible. The gear case lets the assembly of the intermediate shaft and of the wheel axle on the bearing while the case cover is the original one.
- The ignition housing has been designed to be used both with a light flywheel, mainly recommended for the 70cc and with heavier flywheel, recommended for the 100cc.
- The Torsen WD, machined for a block, offers the possibility to use two braking systems:
 - The first one is the classic drum brake and original rim
 - The second one is the brand new hub support in stainless steel that lets you install the wheel rim with d. 180mm brake disc. And the housing of the Polini brake caliper with 2 d.32 pistons.
- Hub, rim and brake caliper are all machined from a block.
- It is also available the front rim with d. 200 disc brake, lighter than the original one.

IL PRIMO MOTORE SCOOTER POLINI EVOLUTION

Sviluppato con soluzioni avanzatissime da MotoGP e specifico per Piaggio Zip SP, è rivolto ai veri riders. Riders che hanno la pista nel loro DNA, che non conoscono difficoltà, che non si accontentano del meglio, ma che vogliono il massimo. Piloti che si nutrono di passione vera, che vivono le corse degli scooter sui circuiti con un unico obiettivo: vincere. Polini Evolution Crankcase per Zip SP con cerchi ruota da 10" nasce da uno studio articolato che non si ferma solo alla realizzazione del carter, ma è un'applicazione correlata dell'intero gruppo motore con tutte le varie parti integrate. Non ha vie di mezzo ma esclusivamente scelte tecniche moderne per ottenere performance senza limiti.

Innumerevoli le caratteristiche tecniche:

- Carter motore in lega leggera fuso in terra concepito con un nuovo supporto motore per ottimizzare la conformazione dello scarico in uscita dal cilindro. Il supporto è montato con due cuscinetti che irrigidiscono il telaio e migliorano la resistenza alla torsione.
- Saranno due gli impianti di scarico disponibili rigorosamente costruiti a mano in acciaio speciale: uno per il motore 70cc. e uno per il motore 100cc.
- Sedi dei cuscinetti allargate e maggiorate con caratteristiche particolari per l'alloggiamento di alberi motore di diametro e larghezza di maggiori dimensioni. Due gli alberi disponibili in base alle cilindrata.
- Sede maggiorata della valvola lamellare d'aspirazione per consentire l'utilizzo di carburatori da 19 mm a 28 mm o con diffusori ancora più grandi. Lo spessore delle lamelle in carbonio della valvola saranno specifiche in base alla cilindrata del motore.
- Sistema di fissaggio del cilindro a flangia. Due i Cilindri fusi in lega leggera raffreddati ad acqua uno Ø47,6 e uno Ø52 direttamente derivati dal motore Polini 125 GP che ha gareggiato nel Mondiale Velocità. Passaggio interno

del liquido di raffreddamento mediante sistema Close Deck. Canna con riporto nichel-silicio. Cinque luci di travaso caratterizzate da diagramma particolarmente performante. Luce di scarico con traversino centrale per ottimizzare l'evacuazione dei gas di scarico. Pistone fuso per gravità in lega leggera ad alto tenore di silicio con segmento cromato.

La testa è proprio quella usata nel motore 125 GP con fissaggio a 6 viti, squish e camera di scoppio dedicate. E' obbligatorio montare la pompa dell'acqua elettrica.

- Particolare la geometria interna del carter studiata per avere maggiore spazio riservato al gruppo trasmissione. L'obiettivo è di utilizzare una nuova cinghia trasmissione con dimensioni maggiori in altezza e larghezza in modo da trasmettere il massimo della motricità. Il carter ingranaggi consente il montaggio su cuscinetti dell'alberino intermedio e dell'albero ruota mentre il coperchio carter esterno rimane l'originale.
- Alloggiamento dell'accensione progettato per essere utilizzato sia con un volano leggero consigliato per la cilindrata 70cc., sia con un volano più pesante consigliato per la cilindrata 100cc.
- Il Torsen WD ricavato dal pieno, offre la possibilità di utilizzare due sistemi frenanti:
 - il primo sistema è il classico con freno a tamburo e cerchio originale.
 - il secondo è il nuovissimo sistema decisamente più performante, con un inedito porta mozzo in acciaio che permette d'installare un cerchio ruota completo di freno a disco da Ø180mm. e alloggiamento per la pinza freno Polini a 2 pistoncini da Ø32.
- Mozzo, cerchio e pinza freno sono tutti prodotti ricavati dal pieno.
- E' anche disponibile il cerchio anteriore che monta un freno a disco da Ø200, più leggero rispetto all'originale.

The new engine support makes use of two bearings instead of the two silent blocks from the earlier version. This makes the frame stiffer and improves its resistance under torsion conditions. The modern geometries make the wheelbase 15mm longer. Thanks to these two features the lap time is lower because the stiffer frame improves the curve entering making it more precise and faster. It is possible to delay the brakes and, thanks to the longer wheel base, it is possible to advance the throttle opening when exiting the corner to give you even more sporting conditions.

Il nuovo supporto motore non è più montato con 2 silentblock, ma con 2 cuscinetti che irrigidiscono il telaio e migliorano la resistenza in torsione. Le moderne geometrie hanno permesso di allungare l'interasse dello scooter di 15mm. Queste due caratteristiche permettono di abbassare il tempo sul giro perché il telaio più rigido migliora l'entrata e la percorrenza di curva rendendola molto più precisa e veloce. E' possibile ritardare le staccate e, grazie all'aumento dell'interasse, si riesce ad anticipare l'apertura del gas in uscita di curva per regalarvi una guida sempre più sportiva.

	The new Polini wheel mounting kit for Piaggio Zip SP eliminates the front wheel vibrations caused by the unstable mounting of the inside rollers cage. It comes with a 20x37x9 2RS bearing. It is necessary to turn the front rim to fit the mounting. Montando il kit supporto ruota Polini per gli scooter Piaggio ZIP modello SP, si elimina la fastidiosa vibrazione della ruota anteriore dovuta al precario supporto della gabbia rulli interna. È fornito completo di cuscinetto 20x37x9 2RS. Per il montaggio è necessario tornare il cerchio anteriore.		
290.0122 Piaggio Zip SP			
	The wheel pin axle made by Polini for Piaggio scooters has been designed to complete the coupling between gears case and Polini ratios. It has the following features: - The inside area has been emptied to lighten and balance the rollers when turning without penalizing its sturdiness - It has been extended towards the wheel nut end to make the fitting of the Polini Torsen WD assembly - Keying Ø 27 L'asse perno ruota costruito da Polini per gli scooter Piaggio è stato progettato per avere il perfetto completamento con il carter ingranaggi ed i rapporti allungati Polini Motori. Si differenzia per queste caratteristiche tecniche: - Svuotato l'interno per alleggerire e bilanciare le masse in rotazione senza penalizzare la robustezza - Allungato verso l'estremità del dado ruota, permette il facile montaggio del forcellone Polini Torsen WD - Calettamento Ø 27

EVOLUTION FORK - PIAGGIO ZIP VESPA SMALL FRAME COMPATIBLE

POLINI EVOLUTION FORK FOR PIAGGIO ZIP - VESPA SMALL FRAME

The Polini Evolution fork for Piaggio Zip, lowered than the original one to be like the model used in the races, has been reinforced in the most stressed structural parts. These features offer a very good set that you can further customize by adjusting the fork height through the interchangeable shims supplied with it.

FORCELLA POLINI EVOLUTION PER PIAGGIO ZIP - VESPA SMALL FRAME

La forcella Polini Evolution per Piaggio ZIP, ribassata rispetto all'originale come si usa nelle competizioni in pista, è rinforzata nei punti più soggetti a stress strutturali. Queste caratteristiche offrono un ottimo set up che è ulteriormente personalizzabile cambiando l'altezza della forcella grazie agli spessori intercambiabili forniti di serie.

X: For models with electric starter it is necessary to shape the exterior side of the cylinder close to the flywheel because the starting ring gear on the flywheel interferes with the cylinder. - *Nel caso sia previsto l'avviamento elettrico è necessario limare leggermente il cilindro sulla parte esterna in prossimità del volano, perché la corona dell'avviamento montata sul volano interferisce con il cilindro*

CYLINDER KITS

GRUPPI TERMICI

Aluminium or cast iron Polini power units are the engine's real heart and they are essential to obtain maximum power, better acceleration, high performance. The transfer ports are developed to achieve a great power output increase. Diagrams are specific to optimize the torque at low rpm and maximum power. They have been tested both on test benches and on tracks with advanced range-finding systems.

I gruppi termici Polini in alluminio o in ghisa sono il vero cuore del motore e sono indispensabili per ottenere massima potenza, maggiore accelerazione, prestazioni altamente performanti. I disegni dei travasi sono progettati per ottenere un incremento della erogazione della potenza. I diagrammi sono specifici per ottimizzare coppia ai bassi regimi e potenza massima. Testati sia al banco prova che in pista con impiego di avanzati sistemi di telemetria.

MUFFLERS

MARMITTE

POLINI MUFFLERS FOR MAXI SCOOTER: HOMOLOGATED ENERGY

MARMITTE POLINI PER MAXI SCOOTER: GRINTA OMOLOGATA

Polini Motori has always been careful to the two-wheel aftermarket needs and for this reason it has enlarged its range with an exclusive line of mufflers proper for Maxi scooters.

The Polini mufflers feature a modern design: they have well-finishing touches and they are very reliable thanks to their high mechanical resistance.

The increased power grants the engine an optimal performance, concretely improving the sprint and pickup.

The sound is energetic but padded thanks to the tested deadening material.

The exhausts can be made of stainless steel or of black anodized light alloy according to the Maxi scooter model and they are sold together with the stainless steel racing pipe (but for the X Max 400 and Metropolis 400).

Polini Motori da sempre attenta alle esigenze dell'aftermarket delle due ruote, amplia la propria gamma con un'esclusiva linea di marmitte specifiche per Maxi Scooter.

Le marmitte Polini si distinguono per il design moderno; sono curatissime nelle finiture e super affidabili, grazie alla straordinaria resistenza meccanica. La maggiore potenza assicura al motore una resa ottimale, migliorando concretamente le caratteristiche di allungo e ripresa.

Il sound è grintoso anche se piacevolmente ovattato grazie all'impiego di materiali fonoassorbenti collaudatissimi.

Gli scarichi possono essere in acciaio inox, oppure, in lega leggera anodizzata nero a seconda del modello di maxi scooter e sono venduti completi di collettore racing in acciaio inox (escluso X Max 400 e Metropolis 400).

European Homologation
directive 97/24/EC ch.5
(measures to be taken against air pollution caused by 2 or 3 wheel motor vehicles)

Reg. 134/2014 ann. 10 (EC-UE) - EURO4 *
(measures to be taken against air pollution)

*** NOTE** Homologation certificates are valid for specified vehicle types only.

European Homologation
directive 97/24/EC ch.9
(permissible sound level and exhaust system for 2 or 2 wheel motor vehicles)

Reg. R92.01 (ECE-ONU) - EURO4 *
(permissible sound level)

NOTE European standards **2006/120/CE** are met only if the original catalytic converter is not removed when fitting an **97/24/CE ch. 9** approved Polini silencer, or if you fit an exhaust system with an Polini exhaust system with an approved (as **97/24/CE ch. 5** standard) catalytic converter

Meets **2006/120/CE** European Directive standards (**97/24/CE cap. 9 + cap.5** European Directive upgrade) #

Meets present standards referred to air pollution and permissible sound level #.

ORIGINAL HOMOLOGATED

The endless demand from the market of original spare parts has goaded Polini's technicians to design a new range of UE HOMOLOGATED mufflers for 50cc scooters. The body, completely made of steel with dull-black paint, has an inside silencer able to grant good performance, maintaining low noise emission levels. A thermal-resistant bulkhead has been fitted outside to protect from heat.

La continua richiesta da parte del mercato di ricambi originali ha spronato i tecnici Polini a produrre una linea di marmitte OMOLOGATE UE dedicata agli scooter 50 cc. Il corpo, realizzato interamente in acciaio con verniciatura nera opaca, è dotato di un silenziatore interno in grado di offrire buone prestazioni mantenendo i livelli fonometrici contenuti. Esternamente è stata applicata una paratia termoresistente per proteggere dal calore.

SCOOTER TEAM 4 HOMOLOGATED

It was born for on track races together with the Polini Scooter Team; it finds its own ideal application on every kind of track, since it is regularly homologated. Suitable for 50cc. engines. Excellent quality-price ratio.

Nata per le corse in pista con il Polini Scooter Team; trova la sua ideale applicazione anche su tutte le strade per la regolare Omologazione. Adatta a motori 50 cc. Ottimo rapporto, qualità prezzo.

FOR RACE

Aggressive design and high performance. The expansion chamber has 7 sectors of different sizes that have been welded among them by hand.

Linea accattivante con prestazioni elevate. L'espansione è composta da ben 7 settori di differenti misure, saldati tra loro interamente a mano.

EVOLUTION

They improve the general engine performance, both the acceleration and top speed, for a fun drive at all the circuits.

Migliorano le prestazioni generali del motore sia in accelerazione che in velocità, per un divertimento di guida assicurato in tutti i circuiti.

PIAGGIO APE 50 EVOLUTION

A specific and performing product for the well-known three-wheels Piaggio scooter.

Un prodotto specifico e davvero performante per il famosissimo tre ruote Piaggio.

VESPA EVOLUTION 125

Great reliability and performance. Exhaust system with "racing" features.

Grande affidabilità e prestazioni. Espansione con caratteristiche "racing".

VESPA PX 125 - PX 200 E

Polini Original Muffler, a classic revisited by Polini Motori.

Marmitta Polini Original, un classico rivisitato da Polini motori.

BIG EVOLUTION

Specific for on track races. To be used only with tuned-up engines.

Specifica per le corse in pista. Da utilizzare solo con motori preparati.

P.R.E. 2 - 70 CC / 100 CC

To be always on the top. The muffler has been designed to better exploit the last technical evolutions of the powerful racing engines.

Per essere sempre al TOP. La marmitta è sviluppata per sfruttare al massimo le ultime evoluzioni tecniche dei motori gara sempre più potenti.

POLINI FOR RACE: THE NEW RANGE OF MUFFLERS FOR 50CC MOTORCYCLES

The homologated exhaust has been developed to better exploit the performance of both the original and tuned engines. The silencer is made of black anodized aluminum. It can be disassembled to make easier the replacement of the deadening material.

L'espansione è stata sviluppata per sfruttare al massimo le prestazioni sia dei motori originali, che quelli potenziati. Silenziatore finale in alluminio anodizzato nero. Può essere smontato per agevolare la sostituzione del materiale fonoassorbente.

Polini transmission parts are masterpieces of research and technology. They have been studied in every single detail to achieve the best power output from the engine of your scooter.

I gruppi di trasmissione Polini sono un vero capolavoro di ricerca e tecnologia. Sono studiati nei minimi dettagli per ottenere la migliore erogazione di potenza dal motore del tuo scooter.

TMAX VARIATOR FILTERS | FILTRI VARIATORE TMAX

203.0149 TMAX 500 Variator filter - Filtro variatore

203.0161 TMAX 530 Variator filter - Filtro variatore

203.0154 TMAX 500-530 variator cooling filter
Raffreddamento variatore TMAX 500-530

242.030 gr. 20

Special grease resistant to high temperatures; lithium and molybdenum disulphide additived. It is specific for CVT variator. Solid lubricant able to firmly stick to lubricated surfaces and fill the microscopic holes.

Grasso speciale per alte temperature; addizionato di litio e bisolfuro di molibdeno. Specifico per variatori CVT. Lubrificante solido in grado di ancorarsi saldamente alle superfici lubrificate e riempire le cavità microscopiche.

AIR SPEED DRIVE FOR HALF PULLEY | AIR SPEED DRIVE PER SEMIPULEGGIA MOBILE

246.032 Piaggio-Yamaha

By using the AIR SPEED DRIVE you improve decisively the aeration inside the crankcase and consequently it increases both the engine performance for long distances covered and the belt life.

Utilizzando AIR SPEED DRIVE si migliora notevolmente l'aerazione all'interno del carter trasmissione pertanto perfeziona sensibilmente sia le performance del motore nelle lunghe percorrenze sia la durata della cinghia.

SPEED CLUTCH 3G FOR RACE | SPEED CLUTCH 3G FOR RACE

Studied to resist to the stress coming from the Maxi scooters transmissions and to the strains when starting, they are designed with three centrifugal shoes for more friction uniformity and being perfectly equilibrated. The clutches are adjustable and can be set-up to achieve the best setting both for a touring use or during the races on track. The adjusting can be executed without removing the clutch from the transmission group.

Concepito per resistere al meglio allo stress della trasmissione dei maxi scooter ed alle sollecitazioni delle partenze, sono progettate con tre masse centrifughe per avere maggiore uniformità d'attrito ed essere perfettamente equilibrate. Le frizioni sono regolabili e possono essere tarate per ottenere il miglior setting sia per un utilizzo touring che per un utilizzo racing. La regolazione può essere effettuata senza smontare la frizione dalla trasmissione.

CLUTCH SPRINGS FOR YAMAHA TMAX

MOLLE FRIZIONE YAMAHA TMAX

245.086 Yamaha TMAX 500

245.087 Yamaha TMAX 530

These compression clutch spring kits are specific for Yamaha TMAX scooter. They are available in two different thrusts easy to recognize thanks to their color: silver-zinc plated and black plated. It is a kit that has been studied to improve and optimize the performance of the clutch engagement and improve the rpm during the coupling. The clutch springs are made of steel with added carbon.

Le molle di contrasto frizione sono specifiche per lo scooter Yamaha TMAX. Disponibili in due differenti spinte di carico facilmente riconoscibili per la colorazione: argento-zincato e nero-zincato. Si tratta di un kit studiato per migliorare ed ottimizzare le prestazioni dell'attacco frizione ed aumentare il numero d'innesto dei giri motore. Le molle di contrasto frizione sono relizzate in acciaio speciale caricato al carbonio.

CLUTCH CENTRIFUGAL WEIGHTS FOR TMAX

MASSE CENTRIFUGHE FRIZIONE TMAX

246.047 Yamaha TMAX 500-530

1) The three rollers together with the Polini clutch spring and added to the 12 original ones grant a minor clutch slipping time increasing at the same time the clutch engagement according to the spring hardness.

2) The three rollers that replace the original ones increase the skidding time of the original clutch.

1) Le tre masse abbinare alle molle Polini di contrasto frizione ed aggiunte alle 12 masse originali garantiscono un minor tempo di pattinamento della frizione aumentando nel contempo il regime d'innesto in base alla durezza delle molle utilizzate.

2) Le tre masse sostituite alle originali aumentano il tempo di pattinamento della frizione originale

■ ARAMID/ORIGINAL BELTS | CINGHIE ARAMID/ORIGINALI

They allow to exploit the whole power developed by the engine; they extend the covered path, improve and optimise the engine transmission.

Permettono di sfruttare tutta la potenza sviluppata dal motore. Allungano le percorrenze, migliorano ed ottimizzano la trasmissione della motricità.

NEW!

This spring, thanks to its honeycomb structure, grants a perfect flatness of the clutch thrust sides and it can bear loads till 200kg. Polini wave spring is set by the factory to bear 80 kg, that can be modified thanks to the setting shims available in the packaging, that let the variation of the load till 200 kg of thrust. The spring is perfectly placed in the clutch hub prearranged with a proper centering housing.

La molla wave è una spirale di nuova concezione prodotta con tecniche costruttive di alta precisione. Questa molla grazie alla sua struttura ad alveare, garantisce un'ottima planarità sulle facce di spinta della frizione e tollera carichi elevati fino a 200 Kg. Di serie la molla wave Polini è tarata per avere un carico di 80 kg., che può essere modificato grazie a spessori di settaggio disponibili all'interno della confezione, che consentono di variare il carico fino a 200 Kg. di spinta. La molla è perfettamente alloggiata nel mozzo frizione predisposto con apposita sede di centraggio.

CP POLINI CARBURETOR

THE FIRST POLINI CARBURETOR. BEYOND THE TECHNOLOGY

This was the Polini's great idea, and this is the great result: an innovative carburetor, whose every single component has been designed, developed and manufactured by the company of Bergamo Available in a wide range of diameters - 15/17.5/19/21/23/24 - it is entirely made of aluminium, it has compact dimensions and it is 40% lighter than a traditional carburetor. The inlet pipe is very short and it features an exclusive concentric design and a geometry that optimizes the air flows when the gases pass through. The overflow of petrol in the atomizer has been designed to ensure correct flow dynamic at every position of the throttle valve when opens. The hole where the petrol enters and the larger needle allow the constant draft even in the most extreme conditions. The float level, completely made of plastic, and the needle seal are carefully controlled in the production department to ensure the same standard of efficiency over time. These features considerably simplify the setup of the carburetor. Thanks to the extremely sophisticated calibration, the petrol-air flows, main and low jets, have been designed to achieve the best performance with lower consumption.

COAXIAL SYSTEM
SISTEMA COASSIALE

NASCE IL PRIMO CARBURATORE POLINI. OLTRE LA TECNOLOGIA.

Questa era la grande idea Polini, e questo è il grande risultato: un carburatore innovativo, dove ogni singolo componente è stato concepito, sviluppato e prodotto dall'azienda bergamasca. Disponibile in un'ampia gamma di diametri 15/17,5/19/21/23/24, è realizzato interamente in alluminio, vanta dimensioni compatte e un peso inferiore del 40% rispetto a un carburatore tradizionale. Il condotto di aspirazione molto corto si distingue per l'esclusivo disegno concentrico e una geometria in grado di ottimizzare al meglio i flussi dell'aria nella fase di transito dei gas. Il trabocco della benzina nel polverizzatore è realizzato in modo tale da garantire una corretta dinamica dei flussi ad ogni posizione di apertura della farfalla. Il foro d'ingresso della benzina e lo spillo più grande permettono il costante pescaggio anche nelle condizioni di utilizzo più estreme. Il livello del galleggiante, completamente in plastica, e la tenuta dello spillo, vengono accuratamente controllati in produzione per assicurare nel tempo lo stesso standard di efficienza. Queste caratteristiche consentono di semplificare in modo sensibile la messa a punto della taratura del carburatore. Grazie allo schema di taratura estremamente raffinato, i flussi benzina aria, getto massimo e getto minimo sono stati concepiti per avere il massimo rendimento con consumi più contenuti.

Ø 24-26-28-30

Polini carburetors are cast in light alloy and they are available in 6 diameters: 24, 26, 28, 30, 32, 34 mm. Their peculiarity consists in having a flat valve made of chromed light alloy to improve the sliding and to be more resistant to abrasion and wear. The new Polini carburetors are assembled in the Polini factory according to specific calibrations. To achieve the highest quality features the carburetors are tested one by one by the mechanics, who control the float level control and needle seal.

I carburatori Polini fusi in lega leggera di alluminio sono disponibili in 6 diametri: 24, 26, 28, 30, 32, 34 mm. Si distinguono per avere la valvola piatta in lega leggera cromata per migliorare lo scorrimento e la resistenza all'abrasione e all'usura. I carburatori Polini sono assemblati all'interno dell'azienda con specifiche tarature. Per ottenere il massimo standard qualitativo tutti i carburatori vengo testati in produzione in particolare: controllo di livello galleggiante e tenuta spillo.

380.0005	MIKUNI dal 280 al 370 - from 280 to 370	10
380.0006	MIKUNI dal 380 al 470 - from 380 to 470	10

The most important feature of the new main jets serie by Polini Motori stays in the high-precision in the manufacturing and in the very careful measurement of the hole to grant a correct carburetion adjustment. **The main jets can be fitted on the Polini, Dell'orto, Keihin, Pwk and Mikuni carburetors.**

L'importanza e la caratteristica della nuova produzione di getti del massimo Polini Motori è l'elevata precisione costruttiva e il controllo effettuato in modo millesimale sulla misurazione del foro di passaggio in modo da garantire una corretta modifica alla carburazione. I getti sono adattabili ai carburatori: Polini, Dell'orto, Keihin, Pwk, Mikuni.

ORIGINAL FILTERS | FILTRI ORIGINALI

Improve air flows during the intake phase. Thanks to their characteristic of filtering and purifying the air perfectly, they optimize the fuel-air mixture increasing the value so that the engine is more performing. They are made up of two sponge layers; a finer one of light blue color with 60 PPI porosity and one opener of black color with 30 pp porosity. The external surface is waved. It offers a greater entrance of the air flow, retaining a 50% more of dust particles.

Migliorano i flussi d'aria in fase d'aspirazione. Grazie alla loro caratteristica di filtrare e depurare perfettamente l'aria ottimizzano la miscela aria-benzina aumentando i valori così da rendere il motore decisamente performante. Sono composti da due strati di spugna; uno più fine di colore azzurro con porosità di 60 PPI ed uno più aperto di colore nero con porosità di 30 PPI. La superficie esterna si distingue per essere ondulata, offrendo una maggiore entrata dei flussi d'aria ma trattenendo nel tempo stesso il 50% in più della polvere grossolana.

360° INTAKE MANIFOLDS | COLLETTORI ASPIRAZIONE 360°

360°

The 360° manifolds range has the rubber part of the sleeve detached from the flange; in this way it is possible to find the right carburetor alignment making the manifold even more adaptable to the different applications.

La serie di collettori 360° hanno la parte in gomma del manicotto svincolata rispetto alla flangia; questo permette di trovare il corretto allineamento del carburatore rendendo il collettore adattabile alle più disparate applicazioni.

Polini electronic CDI controls the engine and it includes connected sensors, actuators, the fuel injection, the ignition and engine auxiliary components. Polini ECM lets the vehicle performance increase through the use of microprocessors of last generation, in synergy with a hardware that has been projected especially for this engine. It's a plug & play CDI. Very easy and fast to install, it's enough to disconnect the original one and connect the Polini ECM. Polini ECM is unique and ready to be installed in your original scooter. In this case it is recommended to install it with Polini Hi-Speed variator. To increase your scooter power with Polini cylinder kit it is possible to update the ECM itself through the supplied device, by selecting the proper map.

Si tratta di una centralina elettronica Polini che gestisce il motore. Comprende i sensori associati, gli attuatori, l'iniezione carburante, l'accensione e i componenti ausiliari del motore. L'ECM Polini permette di elevare le prestazioni del veicolo tramite l'utilizzo di un microprocessore di ultima generazione, in sinergia con un hardware progettato specificatamente per questo motore. Si tratta di una centralina plug & play. Semplicissima e immediata nel montaggio, è sufficiente staccare quella originale e collegare l'ECM Polini. L'ECM è unica ed è pronta per il montaggio sullo scooter originale. In questo caso consigliamo l'abbinamento con il variatore Polini Hi-speed. Nel caso in cui si volesse aumentare la potenza dello scooter con il kit motore Polini è possibile aggiornare la stessa ECM tramite il dispositivo in dotazione, selezionando la mappa desiderata.

LAMBDA PROBE EMULATOR | EMULATORE Sonda LAMBDA

THIS ITEM MUST BE ASSEMBLED ONLY WITH THE VARIATOR 241.746

171.0010 AEROX Neo's 4T Euro 4 dal 2018 →

The lambda probe detects the presence of oxygen in the exhaust gases and lets to adjust the carburation and consequent the stoichiometric ratio. (air/fuel). Polini emulator simulates the signs of the original lambda probe received from the CDI. The original CDI, in this way, is leaded to work with a constant air/fuel ratio, letting the performance improvement of the vehicle and the perfect stoichiometric working. Attached to the probe you find the manual to elude the speed limiter.

La sonda lambda rileva la presenza di ossigeno nei gas di scarico e permette di regolare la carburazione, quindi il rapporto stechiometrico (aria/benzina). L'emulatore Polini simula i segnali della sonda lambda originale ricevuti dalla centralina. La centralina originale, in questo modo, viene indotta a lavorare ad un costante rapporto aria/benzina, permettendo l'aumento delle prestazioni del mezzo e il perfetto funzionamento stechiometrico. Allegate alla sonda si possono trovare le istruzioni per eludere il limitatore di velocità.

PARTI MOTORE

SCOOTERS AND MOTORCYCLE IGNITIONS | ACCENSIONI SCOOTERS E MOTO

It increases the power output at maximum and optimizes the performance at every revolution of the engine. The set-up is very easy thanks to the adjustable pick-up this also does not need the entire ignition group to be disassembled. It assures better acceleration, sprint and breath-taking starts. The flywheel is machined from a block in numerical check workshops to grant a perfect balance while the hub is made of special steel with high mechanical resistance. The ignitions are delivered with four different map settings, which can be personalized according to your own engine. Thanks to the four map settings it is possible to modify every kind of engine, starting from the Evolution 50cc to the most performing Big Evolution 94cc, without forgetting the engine modified using the team Scooters series or For Race parts.

Si distingue per essere straordinariamente performante, incrementa al massimo l'erogazione della potenza e ottimizza le prestazioni ad ogni regime di giri del motore. Il set-up risulta molto semplice grazie al pick-up regolabile senza smontare l'intero gruppo accensione. Assicura maggiore ripresa, spunto, allungo, accelerazioni brucianti. Il volano è tutto ricavato dal pieno con centri lavoro a controllo numerico per garantire una bilanciatura perfetta mentre il mozzo è in acciaio speciale ad alta resistenza meccanica. Il pick up rispetto ad un'accensione a rotore interno assicura una precisione d'anticipo al decimo di grado per garantire massime prestazioni. L'accensione nata per le competizioni, è fornita con la possibilità di essere tarata con 4 mappature differenti. Grazie alle quattro mappe è possibile regolare ogni tipo di motore, dall'Evolution 50cc fino al più performante Big Evolution 94, senza dimenticare i motori modificati con prodotti della serie Scooter Team o For Race.

TRACTION CONTROL T-MAX 530-560

Polini Traction Control device for Yamaha T-Max 530 and 560 has been designed to deactivate the traction control every time you start your scooter without acting on the scooter setting. When the scooter is equipped with special parts that increase the performance and engine rpm, it goes closed to the engagement limit of the original assistance and it causes the cut of the current with consequently engine power reduction. Thanks to the Polini traction Control for Yamaha T-Max device it is now possible to deactivate automatically the traction control when starting your scooter, thus granting smooth and regular performance. The device comes with ON/OFF button to activate and deactivate it and return the scooter to the original factory configuration.

Polini Traction Control per Yamaha T-Max 530 e 560 è stato pensato per disattivare il controllo di trazione ogni volta che si accende lo scooter senza intervenire nel programma di settaggio dello scooter. Quando lo scooter è equipaggiato con parti speciali che incrementano le prestazioni e aumentano i giri del motore esso si avvicina alla soglia d'innesto dell'assistenza originale e provoca il taglio della corrente con i relativi cali del motore. Grazie al Polini Traction Control per Yamaha T-Max è ora possibile escludere il controllo di trazione automaticamente all'accensione dello scooter, così da garantire prestazioni continue e regolari. La centralina è comunque predisposta di un tasto ON/OFF per attivare e disattivare il dispositivo e riportare subito lo scooter allo stato originale. La centralina è stata progettata per essere utilizzata sia sul T-MAX 530 che T-MAX 560. Il montaggio avviene senza tagliare cavi e senza modificare i cablaggi con la possibilità di ritornare alla configurazione originale.

171.0400 T-Max 530-560

UNLIMITED SPEED TRACTION CONTROL T-MAX 560

171.0401 T-Max 560

The new Polini Unlimited Speed-Traction Control device for Yamaha T-Max 560 allows to disable the speed control present on the new generation of the TMax and, at the same time, to deactivate the traction control. When the scooter is equipped with special parts that increase the performance and engine rpm, it goes closed to the engagement limit of the original assistance and it causes the cut of the current with consequent engine power reduction. Thanks to the Polini Unlimited Speed-Traction Control, it is now possible to deactivate automatically the traction control when starting your scooter, thus granting smooth and regular performance. The assembly does not require any cable cutting or wiring modification. The ON/OFF button allows to activate and to deactivate the device and to reset the scooter to the original factory configuration.

Il nuovo dispositivo Polini Unlimited Speed-Traction Control per Yamaha TMax 560, consente di disattivare il controllo di velocità presente sulla nuova generazione di TMax ed allo stesso tempo disattivare il controllo della trazione. Quando lo scooter è equipaggiato con parti speciali che incrementano le prestazioni ed aumentano i giri del motore, esso si avvicina alla soglia d'innesto dell'assistenza originale e provoca il taglio della corrente con relativi cali del motore. Grazie al Polini Unlimited Speed-Traction Control è ora possibile escludere il controllo di trazione automaticamente all'accensione dello scooter, così da garantire prestazioni continue e regolari. Il montaggio avviene senza tagliare cavi e senza modificare i cablaggi. Il tasto ON/OFF consente di attivare e disattivare il dispositivo e riportare subito lo scooter allo stato originale.

PTFE AND FKM OIL SEALS | PARAOLI IN PTFE E FKM

They are perfectly interchangeable to the original ones, and they can be fitted both on the crankshaft and on the CVT's primary gear. They are made of FKM (Fluorocarbon rubber) to better resist to the highest termic stress; the seal lip is made of PTFE (Polytetrafluoroethylene); this feature makes them a lot more durable than the standard original ones, giving them a smaller friction coefficient thus granting less heat dispersions caused by the friction and at the same time maintaining lower temperatures. These oil seals have been studied with racing engines but equally they perfectly fit on the standard engines that haven't been tuned-up. More power is produced from the engine as the friction reduction allows it to reach higher revolutions ranges.

Perfettamente intercambiabili agli originali, possono essere montati sia sull'albero motore che sugli alberi primari delle trasmissioni CVT. Realizzati in FKM (gomma di fluorocarbonio) per resistere ai più elevati stress termici, hanno il labbro di tenuta rivestito in PTFE (politetrafluoroetilene); questa caratteristica, oltre a renderli maggiormente duraturi rispetto agli anelli di tenuta standard, fa sì che abbiano un coefficiente d'attrito nettamente inferiore garantendo quindi minori dispersioni a causa dell'attrito ed al contempo mantenendo temperature più basse. Questi anelli di tenuta sono stati pensati per i motori da competizione ma si adattano perfettamente anche ai motori standard senza kit di potenziamento dove, proprio per la bassa potenza a disposizione, la riduzione dell'attrito permette di raggiungere regimi di rotazione più elevati.

EVOLUTION CASE FOR YAMAHA-MINARELLI HORIZONTAL CARTER EVOLUTION YAMAHA-MINARELLI ORIZZONTALE

Two are the main features: the most important is the primary gear with variator driven pulley. Polini Motori has projected a further working on the case so that it is possible to fit the supplementary gear that works on a pin to be screwed on the shaft itself. Thanks to this the pin is less flexible while usually it is completely overhanging (photo 1). Second important feature is the creation of an air intake conveyor and air vent to improve the variator cooling. In order to eliminate the impurities on the air intake conveyor, a sponge has been fitted in the conveyor (photo 2). Thanks to this technical innovations it is possible to eliminate the Minarelli variator's vibrations and it is possible to exploit all the belt run on the variator. In the tuned-up engines it also increases the speed.

Due le caratteristiche principali: la più importante riguarda l'albero primario con puleggia condotta del variatore. La Polini Motori ha studiato una lavorazione aggiuntiva sul carter in modo da poter inserire un cuscinetto supplementare che lavora su di un perno di prolunga d'avvitare sull'albero stesso. Grazie a questo vincolo supplementare si limita notevolmente la flessione del perno che in origine è totalmente a sbalzo (foto 1). Seconda caratteristica è la creazione di alcuni punti di presa e sfogo d'aria per aumentare il raffreddamento del gruppo variatore. Per eliminare le impurità sul punto di presa d'aria è stata inserita una spugna filtrante di debita grammatura contenuta in un convogliatore appositamente disegnato (foto 2). Grazie a queste evoluzioni tecniche si eliminano le fastidiose vibrazioni del gruppo variatore Minarelli e si riesce a sfruttare la corsa completa della cinghia sul variatore. Nei motori preparati per le competizioni si noterà anche un'importante incremento della velocità.

EVOLUTION GEAR BOX FOR SCOOTER ENGINES | CARTER INGRANAGGI PER MOTORI EVOLUTION

170.0301 Horizontal Yamaha - Minarelli long case engine
Motore Yamaha - Minarelli orizzontale carter lungo

The Polini Evolution gear box is the new gear case die-cast in aluminum. Compared to the original case it can be fitted on the middle shaft bearings and wheel shaft. It improves the reliability and the performance since the sliding problems of the two transmission shafts disappear, that on the original case, slide directly on the cover material. It is supplied with a retainer made of FKM with inserts in PTFE at low friction coefficient specific to reduce the friction and improve the sliding of the primary gear and with OR gasket to replace with the original one to make the servicing easier. The Evolution Gear Box can be fitted using both the original gear and the longer gears and it allows to fit different upgraded variators.

170.0300 Ø12 Piaggio engine for Polini gears with bearings → 2001
Motore Piaggio Ø12 per ingranaggi Polini con cuscinetti → 2001
170.0299 Ø16 Piaggio engine for original gear → 2001
Motore Piaggio Ø16 per ingranaggi originali → 2001

Polini Evolution gear box è il nuovo carter ingranaggi pressofuso in alluminio. Rispetto al carter originale si distingue per consentire il montaggio sui cuscinetti dell'albero intermedio e dell'albero ruota. Questa caratteristica migliora decisamente l'affidabilità e le prestazioni in quanto vengono eliminati i problemi di scorrimento dei due alberi trasmissione che, sul carter originale, scorrono direttamente sul materiale del coperchio. Viene fornito completo di anello tenuta in FKM con inserto in PTFE a basso coefficiente di attrito specifico per ridurre ogni tipo di attrito e favorire lo scorrimento dell'albero primario e di guarnizione OR in sostituzione dell'originale per facilitare eventuali lavori di manutenzione. L'Evolution gear box si può montare utilizzando sia gli ingranaggi originali sia quelli con rapporti allungati e consente il montaggio dei diversi modelli di variatori maggiorati.

171.1001 RPM Counter - range 0~20.000RPM

Digital (Tachometer)	Display range: 0~20,000 RPM Display unit: 100 RPM
Level (Tachometer)	Display range: 0~10,000 /15,000 /20,000 RPM
Display internal	<0,5 second
Shift light	Setting range: 5,000~20,000 RPM Setting unit: 100 RPM
MAX RPM record	Display range: 0~20,000 RPM
Stroke/Piston	Setting range: 2 Stroke: 1, 2, 3, 4, 5, 6 pistons 4 Stroke: 1, 2, 3, 4, 5, 6, 8, 10, 12 pistons
Thermometer	Setting unit: °C & °F for alternative
Thermometer A/B	Display range: 0~250°C (32~482°F) Display unit: 0,1°C (°F)
Display internal	<0,5 second
Thermometer alarm	Setting range: 60~250° C (140~482°F) Setting unit: 1°C (°F)
MAX temperature record	Display unit: 0~250°C (32~248°F)
Volt meter (Input power needed, can't work with CR 2032)	Display range: 8.0~18.0 V Display unit: 0.1 V
Clock	24 H
Battery type	CR 2032 (Lifetime around 2 years)
External power	DC12V
Effective temperature range	-10~ + 60 °C
Meter size	87.5 X 42 X 20.8 mm
Meter weight	Around 72,4 g
Telltale	• Temperature A alarm (Blue) • RPM shift light (Red) • Temperature alarm (Green)

POLINI RPM COUNTER + 2 TEMPERATURES EVERYTHING IS UNDER YOUR CONTROL.

Everything is under your control with the new Polini counter + 2 temperatures. The perfect visual thanks to the big LCD display shows the engine rev both on the bar and digitally. The design of the rev counter bar is adjustable to set the revolutions range according to your engine to have the best visual. It is supplied with two tachometers, voltmeter and the clock device, to have all the necessary information from your engine. The white backlighting improves night view and it is active when connected to the battery. Polini RPM can also be used by motorcycles without battery as supplied with internal battery. In this case, to save the battery, it is not backlit.

POLINI CONTAGIRI RPM + 2 TEMPERATURE TUTTO SOTTO CONTROLLO

Tutto sotto controllo con il nuovo Polini contagiri + 2 temperature. La visione perfetta con il grande display LCD mostra i giri motore sia sulla barra che in digitale. Il design della barra contagiri è regolabile in modo da poter settare il range dei giri in base al motore per avere una migliore visuale. Viene fornito con due termometri, voltmetro e la funzione orologio, per avere tutte le informazioni necessarie dal tuo motore. La retroilluminazione bianca migliora la visione notturna ed è attiva se collegato alla batteria della moto. Polini RPM può essere utilizzato anche dalle moto senza batteria in quanto fornito di pila interna. In questo caso per risparmiare la pila non è retroilluminato.

RPM POLINI: SMALL AND COMPACT

Small and compact the new RPM counter by Polini. Easy to fit, it always displays the figures of the RPM. The white backlighting improves vision in the night and it is active when connected to the battery. Polini RPM can also be used by motorcycles without battery as supplied with internal battery. In this case, to save the battery, it is not backlit.

POLINI RPM: PICCOLO E COMPATTO

Piccolo e compatto il nuovo contagiri Polini RPM. Semplice da applicare mostra sempre in diretta il numero di giri del motore. La retroilluminazione bianca migliora la visione notturna ed è attiva se collegato alla batteria della moto. Polini RPM può essere utilizzato anche dalle moto senza batteria in quanto fornito di pila interna. In questo caso per risparmiare la pila non è retroilluminato.

171.1002 RPM Counter - range 0~15.000RPM

Digital Tachometer	Display range: 0~15,000 RPM Display unit: 10 RPM
Display internal	<0,5 second
RPM input pulse	Display range: 0,5, 1, 1,5, 2, 2,5, 3, 4, 5, 6
External power	DC 12V
Battery type	CR 2032
Battery life time	About 350 H (when battery volume below 250 mAh)
Effective temperature range	-10~+ 60°C
Meter standard	JIS D 0203
Meter size (W X L X H)	69,8 X 34,4 X 17,2 mm
Meter weight	Around 47,6g

POLINI A/F STOICHIOMETRIC RATIO PERFECT CARBURETION

The new POLINI A/F device measures the air/fuel ratio and it is the ideal tool to find the perfect carburetion setting of your 4 stroke motorcycle. The compact dimensions also allow you to leave it positioned on the bike directly connected to the battery and you can easily get the A/F information every time you need. The white backlighting improves vision in the night and it is active when connected to the battery. Polini A/F can also be used by motorcycles without battery as supplied with internal battery. In this case, to save the battery, it is not backlit.

POLINI A/F RAPPORTO STECHIOMETRICO CARBURAZIONE PERFETTA

Il nuovo dispositivo POLINI A/F misura il rapporto aria / carburante è lo strumento ideale per trovare il settaggio perfetto della carburazione della tua moto 4T. Le dimensioni compatte permettono anche di lasciarlo posizionato sulla moto direttamente collegato alla batteria ed ottenere facilmente le informazioni A/F in ogni momento di guida. La retroilluminazione bianca migliora la visione notturna ed è attiva se collegato alla batteria della moto. Polini A/F può essere utilizzato anche dalle moto senza batteria in quanto fornito di pila interna. In questo caso per risparmiare la pila non è retroilluminato.

171.1004 A/F Stoichiometric ratio detector / Rilevatore A/F rapporto stechiometrico

A/F ratio	Display range: 12,2~17,2 Setting unit: 0,1
External power	DC 12V
Battery type	CR 2032
Battery life time	About 450 H (when battery volume below 250 mAh)
Effective temperature range	-10~+60° C
Meter standard	JIS D 0203
Meter size (W X L X H)	69,8 X 34,4 X 17,2 mm
Meter weight	Around 47,6g

DIGITAL RACING SYSTEM (DRS)

The Digital Racing System (DRS) is an accurate engine control device that lets you use the engine safely since it immediately shows the rpm and the temperatures using the CHT or EGT probe, giving the critical information about engine performance and proper carburation. The DRS can program and detect the engine working temperature and if the programmed temperature is achieved a bright LED will flash. It also has two hours run meters, outside air thermometer, self-switching on and off.

Il Digital Racing System è un accurato sistema di controllo del motore che permette di utilizzare il motore in tutta sicurezza poiché visualizza istantaneamente i giri motore e una temperatura con sonda termocoppia CHT o EGT dando pertanto un'indicazione dell'esatta efficienza del motore e di una corretta carburazione. È in grado di programmare e di rilevare la temperatura d'esercizio del motore e nel caso si raggiunga la temperatura programmata, si attiva un segnale di allarme con led ad alta luminosità lampeggiante. È dotato di due contaore, termometro rilevazione temperatura ambiente, autoaccensione ed autospegnimento.

928.830.002 Digital rpm-hourmeter with cht sensor

172.0016 YAMAHA AEROX - APRILIA SR

Polini "TORSEN WD" is the swing arm for all the scooters equipped with Piaggio and Minarelli 50cc engines. The TORSEN WD swing arm, thanks to its truss shape, stiffens the engine cases avoiding anomalous flex that on these types of engine may break the casing. Furthermore the addition of a bearing to support the axles avoids flex and stress improving the transmission efficiency. The system is more rigid improving the stability when driving the bike and when cornering. It reduces the tire asymmetric wear. The TORSEN WD line is clearly inspired to the Moto Gp swing arm with its boomerang design. The muffler stays adherent to the vehicle allowing the bike to lean over on the track to incredible angles without letting the muffler touch the asphalt. TORSEN WD is dedicated both to the on track races use and to the city drive and it can be fitted exclusively together with the new Big Evolution mufflers or the For Race 2. The new range of TORSEN WD swing arms and its attendant mufflers are available for the Piaggio engines, both with short and long case, for the Minarelli engines, CW serie with vertical cylinder, MY serie (air) and MA serie (H₂O) with horizontal cylinder and long case.

Polini TORSEN WD è la serie di forcelloni per tutti gli scooter che montano motore Piaggio e Minarelli 50 cc. Il forcellone TORSEN WD, caratterizzato dalla sua forma a capriata, irrigidisce il carter motore evitando flessioni anomale che, sui motori più performanti, possono portare alla rottura del carter motore. Un cuscinetto di supporto esterno al perno ruota evita inoltre flessioni ed attriti anomali, migliorando il rendimento e le performance della trasmissione. Le caratteristiche di rigidità del forcellone Polini TORSEN WD, assicurano una maggiore stabilità di guida con un controllo ottimale dello scooter soprattutto in curva e, riducendo al tempo stesso l'usura asimmetrica del pneumatico. La linea del TORSEN WD è chiaramente ispirata ai forcelloni delle Moto GP con il caratteristico disegno a boomerang. La marmitta rimane aderente al veicolo permettendo notevoli angoli di piega sulle curve delle piste senza però che lo scarico strisci sull'asfalto. TORSEN WD è destinato sia alle gare in pista, sia al normale uso cittadino. Può essere montato esclusivamente se accoppiato alla nuova gamma di marmitte Polini da competizione Big Evolution o alle marmitte Polini For Race 2. La gamma di forcelloni Polini TORSEN WD e le relative marmitte che ne permettono il montaggio, sono disponibili per i motori Piaggio sia a carter corto che lungo, per i motori Minarelli serie CW cilindro verticale, serie MY (aria) e serie MA (H₂O) con cilindro orizzontale e carter lungo.

ALUMINUM AND NYLON LEVER PROTECTION | PARALEVA IN ALLUMINIO E NYLON

Lever protections used in MOTO GP as front brake shelter become mandatory also in the POLINI ITALIAN CUP. In fact the Factory of Bergamo has equipped its own scooters with a serie of Polini lever protection dedicated not only for the safety in races, but a very important protection for everyday use especially when you move into the city traffic. Aluminum support and plastic lever protection available in total black or blue.

I paraleve utilizzati per sicurezza da alcuni anni nelle gare della MotoGP sono obbligatori anche nella Polini Italian Cup. La Factory Bergamasca ha infatti equipaggiato i propri scooter con una serie di Paraleve Polini destinati non solo alla sicurezza nelle gare in pista, ma anche come protezione nel traffico in città. Supporto in alluminio e paraleve in nylon disponibili nei colori Blu o Nero.

HI-SPEED GRIPS | MANOPOLE HI-SPEED

341.0033

Developed using a specific ergonomic technical solution finalized to the safety driving, they are produced with selected elastomers and technopolymers coming from the aerospace origin. The outside surface is anti-slipping with two different support bases: one smoother specific for the palm, the other right for the fingers. Both the support bases offer a better grip and grant more comfort during the drive. The hand cover flange with ribs prevent the hand from slipping and neutralizes the vibrations.

EVOLUTION GRIPS | MANOPOLE EVOLUTION

341.0036

Sviluppate con specifiche soluzioni tecniche di ergonomia finalizzate alla sicurezza di guida sono prodotte con elastomeri e tecnopolimeri selezionati di derivazione aerospaziale. La superficie esterna è antiscivolo con due differenti basi d'appoggio: una più liscia specifica per il palmo, l'altra più adatta alle dita. Le due basi d'appoggio offrono così una migliore presa e garantiscono maggiore comfort di guida. La flangia paramano con nervature a cedimento controllato impedisce alla mano di scivolare ed elimina le vibrazioni.

BIG EVOLUTION GRIPS MANOPOLE BIG EVOLUTION

341.0026

341.0027

The "Big Evolution" grips are even more specific for the races. They are made by molding two rubbers of a different density. The part in contact with the handlebar is stiffer and more resistant, while the part in contact with the hand is softer in order to give the rider the maximum driving sensibility.

Le manopole "Big Evolution" sono ancora più specifiche per le gare. Sono realizzate con lo stampaggio di due gomme con densità diversa. Più rigida e resistente la parte a contatto con il manubrio, molto morbida la parte a contatto con la base d'appoggio della mano in modo da trasmettere la massima sensibilità di guida al pilota.

RECORD LEATHER SUIT

Leather suit in scooter pilot version designed and built on Polini characteristics.

Main features:

- Bovine leather 1.2 / 1.3 mm thick, tanned in Italy.
- Available in summer perforated version on request.
- Perforated inner lining, with antibacterial and antiseptic "Sanitized" treatment
- No horizontal seams in the front to maintain excellent skin elasticity.
- Triple twisted synthetic thread with very high resistance to abrasion and tension.
- All pieces are sewn twice, flat and inside.
- Aramid / Kevlar stretch fabric inserts on inner arms, inner thighs and crotch, Lycra stretch fabric reinforced on calf.
- Leather bellows on knees, back and shoulders and lower back for better movement in competition.
- Flattened spiral hinges with very high tear and abrasion resistance.
- Removable internal protectors (certified EN 1621-1: 2012) on shoulders, elbows, hips, knees and shin
- External protections on shoulders in resin-coated PVC.
- Double layer of leather in the most exposed points.
- Replaceable knee sliders.

TUTA IN PELLE RECORD

Tuta in pelle in versione pilota scooter studiata e realizzata su caratteristiche Polini.

Caratteristiche principali:

- Pelle bovina con spessore mm. 1,2/1,3 conciata in Italia.
- A richiesta in versione forata estiva.
- Fodera interna traforata, con trattamento "Sanitized" antibatterico e antisettico.
- Nessuna cucitura orizzontale nella parte anteriore per mantenere un'eccellente elasticità della pelle.
- Filo sintetico triplo ritorto ad altissima resistenza all'abrasione e alle tensioni.
- Tutti i pezzi sono cuciti due volte, in modalità piatta e interni.
- Inserti in tessuto elasticizzato Aramidico/Kevlar su interno braccia, interno coscia e inguine, tessuto elasticizzato in Lycra rinforzata su polpaccio.
- Soffietti in pelle su ginocchia, schiena e spalle e basso schiena per un migliore movimento in competizione.
- Cerniere tipo spirale schiacciata ad altissima resistenza allo strappo e all'abrasione.
- Protezioni interne rimovibili (certificate EN 1621-1:2012) su spalle, gomiti, fianchi, ginocchia e tibia.
- Protezioni esterne su spalle in PVC resinato.
- Doppio strato di pelle nei punti più esposti.
- Slider ginocchio sostituibili.

Eco Carpet
Tappeto ecologico

A carpet that protects the ground and the environment too, totally ecological. It keeps the surface clean and intact.

Un tappeto che protegge il terreno e anche l'ambiente, totalmente ecologico. Mantiene la superficie pulita e intatta.

TECHNICAL FEATURES

- Composition: PVC under & NYLON above
- Reverse/back: standard black vinyl
- Pile composition: 100% PA bcf
- Pile weight: +/- 300 gr/sq
- Total weight: +/- 2,500 gr/sq
- Pile height: +/- 3 mm
- Total height: clearance +/- 5 mm
- Finishes: black vinyl border around (+ / -2, 5 cm), straight angle
- Washing: 30° C washable, no dry cleaning

BENEFITS

- Highly absorbent (water, oil, etc. ...) more than 3 L/sq
- High dust control
- Highly resistant to glass and slippage
- Highly fire resistant
- Easy to store

These ecological carpets comply with the FIM (Italian Motorcycle federation) and approved by TÜV (Technical Inspection Association).

CARATTERISTICHE TECNICHE

- Composizione tappetino: PVC sotto & NYLON sopra
- Rovescio/retro : vinile nero standard
- Composizione pile: 100% PA bcf
- Peso pile : + 300 gr/m2
- Peso totale: + 2.500 gr/m2
- Altezza pile: + 3mm
- Altezza totale: + 5mm
- Finiture: bordo intorno vinile nero (+ 2,5cm), angolo dritto
- Lavaggio: lavabile 30°C , no lavaggio a secco

BENEFICI

- altamente assorbente (acqua, olio, ecc...) più di 3L/m2
- alto controllo su polveri
- altamente resistente al vetro e scivolamento
- altamente resistente al fuoco
- facile da conservare

Questi tappeti ecologici sono CONFORMI alla FIM (Federazione motociclistica italiana) e approvati dalla TUV (associaz. controllo tecnico).

- Aluminium supports
- Crystal tempered glasses and door with safety key lock
- Adjustable shelves
- Sheet metal, punctured back to hang up products with hooks (10 are already supplied together with the package)
- Ceiling light in the upper side, with a height of 15cm with front Polini lighted logo
- Basis with 4 wheels
- Montanti laterali in alluminio
- Vetri in cristallo temperato e anta con chiusura di sicurezza con chiave
- Ripiani regolabili
- Schienale in lamiera blisterata per poter appendere i prodotti con l'utilizzo di ganci (10 sono già forniti nella confezione)
- Illuminazione interna dei prodotti con due faretti alogeni
- Plafoniera nella parte superiore alta 15 cm. con frontalino riportante il logo Polini illuminato
- Base con 4 ruote

It all started in the far away 1945.

Immediately after the post war period Italian people move mostly by bicycle. The founder, Battista Polini, coming back from the front, opens his own workshop and he specializes in the manufacture of bicycles. Soon the country recovers with pride, and on the thrust of the thriving industrial development, Italian inspiration and creativity soon give their results. One above all, the Vespa, an icon of design and at the same time symbol of rebirth.

Times change but philosophy doesn't change and the passion that animates the Polini family too: the continuous search for new solutions to ensure the engines better performance, with the maximum safety and reliability as possible. It is also thanks to this commitment that Polini has become a world leader in the design and in the production of special parts for scooters and Maxi scooters.

At the beginning of '90s Polini gives birth to a new project and begins producing a series of Minibikes, authentic miniature Grand Prix bikes, entirely "Made in Italy" and characterized by reliable technical solutions. Many MotoGP champions have made their "first steps" on the track riding these little MotoGP bikes. First and foremost, Valentino Rossi.

In 1997 Polini introduces a new line of Minicross with 2T engines which have accompanied from the beginning the career of many MXGP and MX2 champions.

From 2009 Polini production is enhanced with the Polini Thor brand, the most complete range of 2 stroke paramotors engines on the market, from 80cc to 250cc for the many demands of flight. A winning choice that has allowed the company to win many national and world Titles in the different specialties.

In September 2016 Polini Motori presents the new challenge: the innovative E-P3 electric motor for e-bikes. A new commitment dictated by a more sensitive attention to environmental issues and eco-friendly lifestyle trends. From that small workshop in 1945 Polini Motori has done a lot of way.

Present in more than 64 countries in the world, it keeps, now as then, its headquarters in Alzano Lombardo, Bergamo.

Tutto ha inizio nell'ormai lontano 1945.

Lo scenario dell'immediato dopoguerra vede un'Italia che si sposta prevalentemente in bicicletta. Il fondatore, Battista Polini, di rientro dal fronte, apre la sua piccola officina e si specializza proprio nella costruzione di biciclette. Ben presto il Paese si risollewa con orgoglio, e sulla spinta del fiorente sviluppo industriale, l'estro e la creatività italiana non tardano a dare i primi straordinari risultati. Uno su tutti, la Vespa, icona del design e nello stesso tempo simbolo della rinascita. I tempi cambiano ma non cambiano filosofia e passione che animano la famiglia Polini: la continua ricerca di nuove soluzioni per garantire ai motori performance sempre migliori, nella massima sicurezza e affidabilità possibili. E' anche grazie a questo impegno che Polini è diventata leader mondiale nella progettazione e produzione di parti speciali per scooter e maxiscoter.

A partire dagli anni '90 Polini dà alla luce un nuovo progetto ed inizia la produzione di una serie di minibike, autentiche moto da Gran Premio in miniatura, interamente "Made in Italy" e caratterizzate da soluzioni tecniche affidabili e sicure. In sella a questi piccoli bolidi campionissimi della MotoGP hanno compiuto i loro "primi passi" in pista. In primis, Valentino Rossi. Nel 1997 Polini presenta una nuova linea di Minicross con motori 2T che hanno accompagnato fin dagli esordi la carriera di numerosi campioni della MXGP e MX2.

Dal 2009 la produzione Polini si arricchisce del brand Polini Thor, la più completa gamma sul mercato di paramotori due tempi da 80cc a 250cc destinate alle molteplici esigenze di volo. Una scelta vincente che ha permesso all'azienda di conquistare numerosi Titoli Nazionali e Mondiali nelle diverse specialità.

A settembre 2016 Polini Motori presenta la sua nuova sfida: l'innovativo motore elettrico E-P3 per bici E-Bike. Un nuovo impegno dettato da una più sensibile attenzione ai temi ambientali e alle ultime tendenze di uno stile di vita ecosostenibile.

Da quella piccola officina del '45 Polini Motori ne ha percorsa tanta di strada, e di pista.

Presente in oltre 64 paesi del mondo, mantiene, oggi come allora, la propria sede ad Alzano Lombardo, in provincia di Bergamo.
